Subject: Additional Soil Sampling at Hobart
Date: Monday, April 11, 2022 12:11:00 PM

Hi Eric,

I am very sorry for the short notice.....

Please see Ray's (EPA's contractor) e-mail below. Based on the soil sampling results (from December 2021), there are a few areas where TCE in soil remains above the cleanup standards. So, we need to collect a few more samples to properly define the excavation boundary. Because TCE is present at depth adjacent to the Hobart building, we'll need to conduct a structural stability evaluation to determine the type of shoring that will be needed for the future soil excavation. To do a proper evaluation, we need to see the inside the building along where the future excavation will be done. Is it possible to gain access to your building?

Please let us know. I am cc'ing Ray as he is coordinating this field work. Thank you so much, Shari

Subject: East Troy update

Hi all,

We will be back out to collect a few more soil samples behind Hobart this week. We expect to be on site Wednesday afternoon, most of the day Thursday, and possibly for a short time in the morning on Friday.

With respect to the drum of soil staged at the WWTP, we might place a little more soil in the drum this week (most likely Thursday afternoon). Once our sampling work is completed this week, we will make arrangements for the drum to be removed.

Also, I don't believe I have contact information for Exemption 6- Personal Privacy (owner of the Hobart building). If anyone has his phone number readily available, that would be much appreciated.

Thanks,
 Ray
